7EE - EVAN MCINTYRE

Geotechnical engineering is focused mainly on using a combination of knowledge plus methods in solving geoenvironmental problems, while geoenvironmental engineering goes a little further to include how to mitigate and assess natural hazards, the resolution of waste contamination, containment, remediation, and the like.

Practicing geotechnical and environmental engineers can apply the theory and case studies in the book directly to current projects. The book first discusses the stages of economic development and their connections to the sustainability of the environment.
