Human And Natural Factors That Natural factors: Natural factors refer to physical factors i.e. climate, type of soil, availability of waters etc. which affect both positively and negatively the productivity of crop and animal farming. Human Factors: Human factors refer to economic factors i.e. money investment, machinery, skilled labour etc.

Natural and human factors that influence the cli-

mate (known as "climate drivers") Many natural and human factors (also called drivers ) influence the climate. Emissions from cars and power plants and an increase in the amount of radiation the sun emits are examples of " forcings " that drive temperature rise, the first one by trapping heat, and the second one by increasing energy, which ...

Human factors and ergonomics (commonly referred to as human factors) is the application of psychological and physiological principles to the engineering and design of products, processes, and systems. The goal of human factors is to reduce human error, increase productivity, and enhance safety and comfort with a specific focus on the interaction between the hu-

man and the thing of interest.

Today, we're going to look at three problematic human activities and how they increase our risk for natural disasters. Agriculture Most people eat some form of animal products throughout the day.

**What Causes Global Warming: Human or Natural Factors ...**

Multiple Factors . Some animals are endangered because of a combination of natural and man-made causes. The West Indian manatee is an endangered aquatic mammal that lives in rivers, estuaries, canals and saltwater bays. Manatees need warm water to survive. In the winter they live in southern Florida and parts of Georgia.

**Landslides Caused by Natural and Human Factors**

Humans interact with the world around us every day, but some of our actions are more harmful than others. As our population approaches 7 billion people, the effects of human activities on the ecosystem, including the water, air, land and the life that we share the world with, are almost immeasurable.

This follows up on recent posts on whether human or natural factors cause global warming (hint: it's the former) and more science on human versus natural causes of global warming. 'Virtually' Certain Effect of Human-Caused 'Climate Change Is Observable in Arctic Sea Ice Already Today' (Study) | Planetsave May 11, 2012 at 9:41 pm

(1) Landslides caused by natural factors, and (2) Landslides caused by human activities, particularly slope modifications. Natural Factors: Natural factors are necessarily physical, which include geomorphology, geology, excessive rainfall, triggering events, etc. Slopes of geologically active NDBR are made up of complicated geo-structural and ...
