An intelligent, relevant, and lively new introduction to fiction builds on the success of its parent text, *Understanding Literature*. With accessible discussions of historical and cultural contexts and critical approaches, biographical information, and a stimulating table of contents, *Understanding Fiction* offers instructors and students an innovative option in anthologies. Accom-

panied by the *Understanding Literature* CD-ROM and Web Site, *Understanding Fiction* enriches the reading experience, enhances critical thinking, and promotes mastery in writing about fiction. Well-balanced selections juxtapose canonical authors with new voices not often anthologized and focus particular attention on ethnically diverse writers. Complete coverage of formal elements ensures that students understand such basics as character analysis, setting, point of view, plot, and narration. Extensive writing guidance teaches students how to write critically about literature in general and about fiction in particular, and includes instruction on writing a research paper. Unique, integrated, and accessible treatment of critical approaches enriches the course with more complex tools of literary study to help students develop insights and explore meaning in literature. A wealth of visual texts—including a color insert—enriches the study of literature with related photographs and works of art and provides lively new contexts in which students can view authors, artistic movements, and cultural developments. Chapter 17, "Fiction Across Media: Film," compares how stories are constructed in print and in film and includes a case study analysis of the print and film versions of Julio Cortazar's "Blow Up." Unique Chapter 18, "The Limits of Fiction: Autobiography" discusses how autobiography's combination of fact, memory, and opinion can fall between fiction and nonfiction writing. The chapter highlights such authors as Mark Twain, Jean Rhys, Carl Van Vechten, Chester Himes, Nicole Brossard, and W.S. Penn Chapter 19, "Writing Communities: The Beats," adapted from "The Beats" inter-genre chapter in the parent text, retains a short story by William S. Burroughs and adds selections from Diane di Prima and Jack Kerouac.

This sumptuously illustrated volume analyzes artists' representations of angels and demons and heaven and hell from the Judeo-Christian tradition and describes how these artistic portrayals evolved over

time. As with other books in the *Guide to Imagery* series, the goal of this volume is to help contemporary art enthusiasts decode the symbolic meanings in the great masterworks of Western Art. The first chapter traces the development of images of the Creation and the Afterworld from descriptions of them in the Scriptures through their evolution in later literary and philosophical works. The following two chapters examine artists' depictions of the two paths that humans may take, the path of evil or the path of salvation, and the punishments or rewards found on each. A chapter on the Judgment Day and the end of the world explores portrayals of the mysterious worlds between life and death and in the afterlife. Finally, the author looks at images of angelic and demonic beings themselves and how they came to be portrayed with the physical attributes--wings, halos, horns, and cloven hooves--with which we are now so familiar. Thoroughly researched by and expert in the field of iconography, *Angels and Demons in Art* will delight readers with an interest in art or religious symbolism.

Warfare in the twenty-first century goes well beyond conventional armies and nation-states. In a world of diffuse conflicts taking place across sprawling cities, war has become fragmented and uneven to match its settings. Yet the analysis of failed states, civil war, and state building rarely considers the city, rather than the country, as the terrain of battle. In *Cities at War*, Mary Kaldor and Saskia Sassen assemble an international team of scholars to examine cities as sites of contemporary warfare and insecurity. Reflecting Kaldor’s expertise on security cultures and Sassen’s perspective on cities and their geographies, they develop new insight into how cities and their residents encounter instability and conflict, as well as the ways in which urban forms provide possibilities for countering violence. Through a series of case studies of cities including Baghdad, Bogotá, Ciudad Juarez, Kabul, and Karachi, the book reveals the unequal distribution of insecurity as well as how urban capabilities might offer resistance and hope. Through analyses of how contemporary forms of identity, inequality, and segregation interact with the built environment, *Cities at War* explains why and how political violence has become increasingly urbanized. It also points toward the capaci-

ty of the city to shape a different kind of urban subjectivity that can serve as a foundation for a more peaceful and equitable future.

Drowning in \$20,000 of credit card debt, shopaholic Karyn Bosnak asked strangers for money online -- and it worked! What would you do if you owed \$20,000? Would you: A) not tell your parents? Karyn started a funny yet honest website, www.savekaryn.com, on which she asked for donations to help her get out of debt. This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical

computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong

spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
