For centuries, the lighthouse has stood as a beacon of guidance for mariners at sea. More than an aid to navigation, the lighthouse symbolizes safety, permanence, reliability, and the comforts of the familiar. For this reason, we have chosen to illustrate the twelfth Canadian edition of our flagship Managerial Accounting publication by Garrison/Libby/Webb with a lighthouse image that encapsulates the greatest strengths of this market leading text. Garrison guides students through the challenges of learning managerial accounting. It identifies the three functions managers must perform within their organizations--plan operations, control activities, and make decisions--and explains the accounting information necessary for these functions. The twelfth Canadian edition of Managerial Accounting continues to place an emphasis on three core qualities: relevance, balance and clarity.

The objective of this book is to make you a better manager by enabling you to understand and apply managerial accounting techniques effectively. The main topics are discussed in a logical order, often accompanied by an illustration of how each technique is applied. Answers to questions are given at the end of each chapter.

This book, probably the first written from the perspective of software professionals, attempts to introduce them to the mysteries of strategic managerial accounting (SMA). The common view in the industry is that "accounting is for the accountants", despite the fact that IT professionals are regularly confronted by financial situations such as project pricing, performance measurement, risk estimation, costs allocation etc. While it is desirable and even necessary that every proposal be vetted by respective specialists, the speed and reliability of the process could improve if the people who originate the proposal had knowledge of the fundamentals that go into the decision making. Unfortunately most books on management accounting, whether strategic or other-

wise, are written from the perspective of the manufacturing industry. The IT and services industry on the other hand has a unique cost structure, quite distinct from manufacturing, which needs to be dealt with from a different perspective. This book focuses on SMA in context of the IT software industry, and seeks to equip the IT professional with some basics of SMA to assist them in making more informed decisions.

The book introduces pragmatic constructivism as a paradigm for understanding actors' construction of functioning practice and for developing methods and concepts for managing and observing that practice. The book explores, understands and theorises organisational practices as constructed through the activities of all organisational actors. Actors always act under presumptions of a specific actor-world-relation which they continuously construct, adjust and reconstruct in light of new experiences, contexts and communication. The outcome of the actor-world-relation is a reality construction. The reality construction may function successfully or it may be hampered by fictitious and illusionary elements, due to missing or faulty actor-world relations. The thesis is that four dimensions of reality - facts, possibilities, values and communication - must be integrated in the actor-world-relation if the construct is to form a successful basis for effective, functioning actions. Drawing on pragmatic constructivism, the book provides concepts and ideas for studies regarding actors and their use of management accounting models in their construction of organized reality. It concentrates on researching and conceptualizing what creates functioning reality construction. It develops concept and methods for understanding, analysing and managing the actors' reality constructions. It is intended for people who do research on or work actively with developing management accounting.

Management Accounting is part of the celebrations to mark CIMA's 90th anniversary in 2009. It looks at the development of cost and management accounting from the founding of the Institute to today. It considers a number of immediate challenges to management accountants and surveys a range of issues and challenges that will likely affect management accounting thought and practice in the future. The authors examine the possibilities for ac-

accountants to widen their focus and become more familiar with the enterprise technology determining their organisations' cost structures and with the effects of multiple production in various locations, such as economies or diseconomies of scale. Such change may require the alteration of traditional cost models used by accountants to become more nuanced. The book suggests how this may be accomplished and highlights the need for management accountants to work as part of management teams throughout the organisation as business partners rather than remain grounded in specialist information provision roles. Alnoor Bhimani is Professor of Management Accounting at the London School of Economics. He is also a Certified Management Accountant as well as an author of 15 books and over 100 articles. Michael Bromwich was CIMA's Professor of Accounting and Financial Management at the London School of Economics and Political Science (1985 to 2006), now Emeritus. He is a Past President of CIMA (1987/88) and currently serves on CIMA's Technical Committee. There is growing interest in the history of accounting amongst both accounting practitioners and accounting academics. This interest developed steadily from about 1970 and really 'took off' in the 1990s. However, there is a lack of texts dealing with major aspects of accounting history that can be used in classrooms, to inform new researchers, and to provide a source of reference for established researchers. The great deal of research into cost and management accounting in Britain published in academic journals over the last twenty years—including the authors' own contributions—makes *The History of Cost and Management Accounting* an essential contribution to the field.

This book explains how True Cost Accounting is an effective tool we can use to address the pervasive imbalance in our food system. Calls are coming from all quarters that the food system is broken and needs a radical transformation. A system that feeds many yet continues to create both extreme hunger and diet-related diseases, and one which has significant environmental impacts, is not serving the world adequately. This volume argues that True Cost Accounting in our food system can create a framework for a systemic shift. What sounds on the surface like a practice relegated to accountants is ultimately a call for a new lens on the valuation of food and a new relationship with the food we eat,

starting with the reform of a system out of balance. From the true cost of corn, rice and water, to incentives for soil health, the chapters economically compare conventional and regenerative, more equitable farming practices in and food system structures, including taking an unflinching look at the true cost of cheap labour. Overall, this volume points towards the potential for our food system to be more human-centred than profit-centred and one that has a more respectful relationship to the planet. It sets forth a path forward based on True Cost Accounting for food. This path seeks to fix our current food metrics, in policy and in prac-

tice, by applying a holistic lens that evaluates the actual costs and benefits of different food systems, and the impacts and dependencies between natural systems, human systems, agriculture and food systems. This volume is essential reading for professionals and policymakers involved in developing and reforming the food system, as well as students and scholars working on food policy, food systems and sustainability.
