There are many ways to solve a physics problem. One part of learning how to solve a problem is to know what approach to use. You will need to outline the concepts and principles you think will be useful in solving the problem. If simple motions are involved, use the kinematics definition of velocity and acceleration.

Motion with variable acceleration is quite complicated. Only in some special cases can we easily solve such problems, but usually we need to solve second order differential equations to get the answer in these problems. All of the equations of motion in kinematics problems are expressed in terms of vectors or coordinates of vectors.
