In this Second Edition of her bestseller, Christine Sleeter and new co-author Judith Flores Carmona show how educators can learn to teach rich, academically rigorous, multicultural curricula within a standards-based environment. The authors have meticulously updated each chapter to address current changes in education policy and practice. New vignettes of classroom practice have been added to illustrate how today's teachers navigate the Common Core State Standards. The book's field-tested conceptual framework elaborates on the following elements of curriculum design: ideology, enduring ideas, democratized assessment, transformative intellectual knowledge, students and their communities, intellectual challenges, and curriculum resources. *Un-Standardizing Curriculum* shows teachers what they can do to "un-standardize" knowledge in their own classrooms, while working toward high standards of academic achievement. **Book Features:** Classroom vignettes to help teachers bridge theory with practice in the context of commonly faced pressures and expectations. Guidance for teachers who want to develop their classroom practice, including the possibilities and spaces teachers have within a standardized curriculum. Attention to multiple subject areas and levels of schooling, making the book applicable across a wide range of teacher education programs. A critique of the tensions between school reforms and progressive classroom practice. "This second edition is a game changer for educators interested in powerful curriculum engineering to support new century students" —H. Richard Milner IV, Helen Faison Endowed Chair of Urban Education, University of Pittsburgh "This text breaks new ground with a timely contribution that provides solid, potentially emancipatory grounding for a new, inclusive, research-based vision of curriculum, assessment, schools, and society." —Angela Valenzuela, author "This is a book that teachers, teacher educators, policymakers, and researchers will continue to return to for guidance and inspiration." —Dolores Delgado Bernal, University of Utah

Maat is the moral ideal of ancient Egypt whose texts contain information on Egypt's moral standards, its concepts of right from wrong, codes of behaviour and obligations. Written by a teacher of the tradition of Maat, this study is the "first philosophical book that is based on a philologically and historically critical treatment of first-hand Egyptian material". Focusing on the Maatian ideal rather than moral practices, Karenga discusses what Maat is and its place within the genre of philosophical ethics and morality, asking what it can contribute to modern African culture and values. Extracts are transcribed and translated into English.

East Asia is normally identified as a group of countries lying along the western edge of the Pacific Ocean, but in recent years scholars have begun thinking about a new East Asia that is a community rather than a set of sovereign states. This regional community is a theoretical notion variously defined on the basis of economic or political relations, philosophical orientations, language or other criteria, with each standard producing a different set of boundaries. This book looks at the new East Asia from a Northeast Asian perspective, considering it both as a theoretical construct and a practical reality. The authors are Asian Studies specialists, mainly from Japan but with contributions from Korea and the United States, and they consider

the trade and economic interaction, diplomacy, and security arrangements of East Asia. Prepared as part of a five-year research program conducted by Waseda University's 21st Century Center of Excellence for the Creation of Contemporary Asian Studies, the essays are published here in English for the first time.

Aimed at academic, professional and general readers, Bush, city, cyberspace provides a snapshot of the state of Australian children's and adolescent literature in the early twenty-first century, and an insight into its history. In doing so, it promotes a sense of where Australian literature for young people may be going and captures a literary and critical mood with which readers in Australia and beyond will identify. The title of the work is intended to capture the fact that the field has changed dramatically in the century and a half that 'Australian children's literature' has existed, from the bush myths and heroism that inform the past and the present, through the recognition that the vast majority of authors and readers live in cities, to the third wave of 'cyberliterature' that incorporates multimedia, hypertext, weblinks and e-books - none of which lessens the enduring enthusiasm of practitioners and readers for books. Bush, city, cyberspace is not meant to be an encyclopedic volume. Rather, well-known, recent and/or award-winning works have been emphasised, with the addition of others where these help to illuminate particular points. The book is similar in coverage and approach to Australian Children's Literature: An Exploration of Genre and Theme, written by the same three authors and published by the Centre for Information Studies in 1995. In the intervening period, much has changed in the field, notable examples including the blurring of the dividing line between 'quality' and 'popular' literature; the blending of genres; the rise of a truly indigenous literature; the demise, to a significant extent, of 'Outbackery' in fiction; the acceptance of multiculturalism as the norm; and the advent of the literature of cyberspace, with new methods, and the sheer speed, of communication between writer and reader. All these trends, and others, are reflected in this work.

Effectively master the most important principles and facts in pathology with this easy-to-use new edition of Robbins and Cotran Review of Pathology. More than 1,100 questions—reviewed and updated to reflect the new content in the parent text—reinforce the fundamentals of gross and microscopic

pathology as well as the latest findings in molecular biology and genetics.
