Often, muscle weakness at the elbow and neighboring areas are contributing to the persistent elbow pain. Research suggests there is an association between posture and shoulder muscle weakness in people with tennis elbow. Research shows a link between tennis elbow and muscle strength of the serratus anterior, lower trapezius, and middle trapezius. Shoulder and Elbow Trauma and Its Complications: Volume 2: The Elbow provides an update on elbow surgery, a type of

procedure that is seeing a significant increase in recent years. Although some of these surgeries are due to an aging population, a large proportion of operations are being performed on younger patients who have damaged their joints through physical activity.

Many possibilities: Shoulder and elbow pain can be caused by a lot of things. The pain could be coming from local problems, such as tendonitis, bursitis or arthritis.

Elbow stiffness may be the result of arthritis or may be the result of a trauma, such as a fall, or any other form of physical injury. A stiff elbow can significantly affect the function of the arm as a whole. Shoulder Weakness. Shoulder weakness may make it difficult to lift the arm and perform overhead activities. Our Shoulder and Elbow Program offers

arm pain relief through personalized care, upper extremity expertise and innovative advances, including the latest implants and operating room technology. Our award-winning orthopaedic doctors work together to provide safe, consistent and effective care.
