006 - STEVENS HEAVEN

Printing an image that's saved in a larger color space than the printer can handle can lead to dull-looking images as the printer is out of gamut (meaning the colors aren't able to be reproduced on the printer). Most print labs will ask for your files in sRGB but certain high-end locations might be able to print on Adobe RGB.
A companion to The Digital Negative: Raw Image Processing in Lightroom, Camera Raw, and Photoshop, this book teaches you how to take your already perfected images and optimize them for the highest quality final printing. Jeff teaches you about printer types and principles of color management so you get the results you expect. He also shares his strategies on proofing, sharpening, resolution ...

When you are preparing and optimizing images for printing it's often a good idea to over-sharpen them. The reason is that many printers use a process called half-toning, which tends to have a softening effect on images. Half-toning is necessary because most printers cannot print continuous tones. This means photographs need to be converted to a series of dots for effective printing. In ...
